

## COIL SPRING INSULATORS

### FEATURES & BENEFITS

While coil spring insulators are not the most evident part of your car's suspension, their role is still essential. They act as a cushion to suspension movement, and assist coil springs in dampening road noise. However, because they're made from rubber, they are subject to deterioration over time.

- Improved handling on the road
- Provides more comfortable ride
- Supports weight of vehicle
- Isolates road noises
- Provides even suspension loading

**MRC's** coil spring insulators are engineered in the USA and are made of only premium rubber compounds, ensuring a longer lifespan than your typical aftermarket coil spring insulator.

Coil spring insulators should be changed during any spring replacement, as they will collapse and lose effectiveness.
